MORNSUN®

## Single universal CAN isolation transceiver module

FEATURES

● Two- port isolation (3.0kVDC)

● High baud rate up to 1Mbps

● Operating temperature range: -40℃ to +105℃

● The bus is able to support 110 nodes at maximum

● Set isolation and ESD bus protection in one

● EN60950 approval

RoHS CE 3 years Warranty

TD321DCAN / TD521DCAN, the main function is to convert TTL / CMOS level to CAN bus differential level, to achieve signal isolation; is a use of IC integrated technology to achieve the power isolation, signal isolation, CAN transceiver and bus protection in one CAN bus transceiver module, can achieve 3000VDC electrical isolation. Products can be easily embedded in the user equipment, so that equipment can easily achieve CAN bus network connectivity.

Application Precautions

1. Please read the instructions carefully before use; contact our technical support if you have any problem;

2. Do not use the product in hazardous areas;

3. Use DC power supply for the product and 220V AC power supply is prohibited;

4. Do not dismount and assemble the product without permission to avoid failure or malfunction of equipment;

After-sales service

1. Ex-factory inspection and quality control have been strictly conducted for the product; if there occurs abnormal operation or possibility of failure of internal module, please contact the local representative or our technical support;

2. The warranty period for the product is 3 years as calculated from the date of delivery. If any quality problem occurs under normal use within the warranty period, the product can be repaired or changed for free.

Applied circuit

Refer to the CAN Industrial Bus Interface Isolating Module Application Manual.

Design Reference
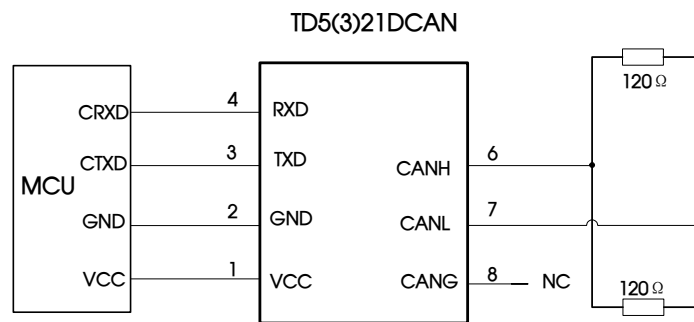

1. Typical application circuit

Fig.1

In general, the module, which is properly connected to the power supply, CAN controller and CAN bus network interface, can be used directly by customers without adding peripheral circuits. Figure 1 shows a typical application circuit connection for a module.

Notes: The CAN controller logic level should be compatible with TD5(3)21DCAN isolated CAN transceiver module.

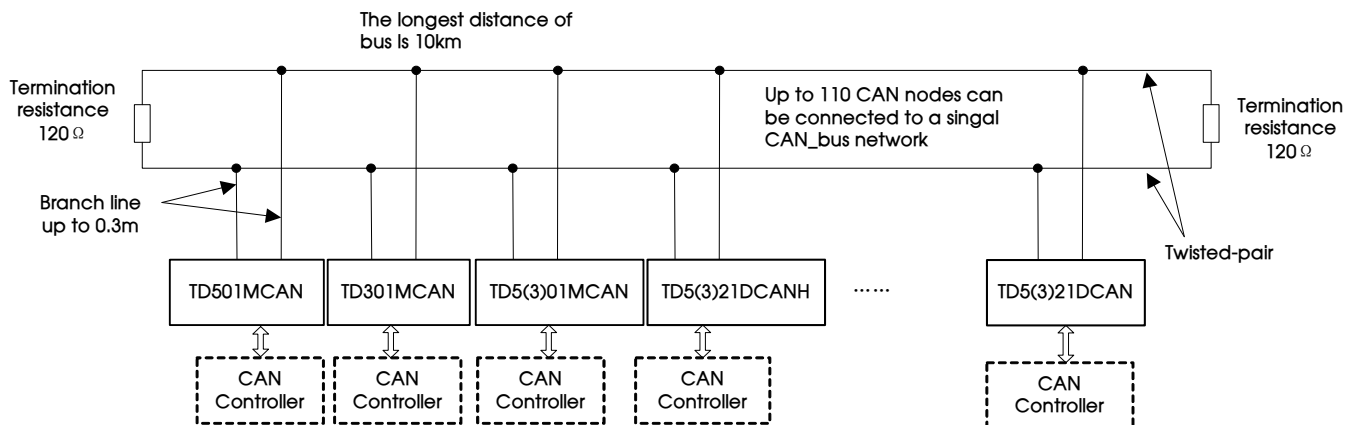

Fig.2

As shown in Figure 2, a single CAN-bus network can connect up to 110 single-channel TD_CAN isolated CAN transceiver modules. The universal type module can support a max. communication distance of 10km while the high-speed type module can support a max communication distance of 1km with baud rate beyond 40kbps. If looking to access more nodes or longer communication distance, it can be achieved by using CAN repeaters or other expansion equipment.

Notes: The communication distance of the bus is related to the communication speed and field application. It can be designed according to the actual application and reference standard. The communication cable is recommended to twisted pair or shielded twisted pair and should stay away from the interference source. For long-distance communication, the terminal resistance value needs to be selected according to the communication distance and the cable impedance and the number of nodes.

## 2. Recommended port protection circuit

Notes:Twisted pair shield grounded reliably.

Parameter declaration:

| Components	Recommended parameters	Components	Recommended parameters
R3	1MΩ	R1、R2	2.7Ω /2W
C1	102,2kV	D1、D2	1N4007
T1	ACM2520-301-2P	D3	SMBJ15CA
GDT	B3D090L		

When the module is used in harsh field environment, it is susceptible to large energy of lightning strike. In this case, it is necessary to add protection circuit to the CAN signal port to protect the module from damage and ensurethe reliability of bus communication. Figure 2 provides a recommended protection circuit design for high-energy lightning surges, with a degree of protection related to the selected protection device. Parameter description lists a set of recommended circuit parameters, which can be adjusted according to the actual application situation. Also, when using the shielded cable, the reliable single-point grounding of the shield must be achieved.
 Notes: This recommended parameter is only the recommended value, which is subject to the actual application.
 Recommended R1, R2 use PTC, D1, D2 use fast recovery diodes.
