

MAGNETIC POLE VIEWING FILM, SIZE: 35*25mm

P/N: 190844

The pole observation piece is made of a special imported material. It is mainly used to detect the distribution of magnetic field lines and poles after magnetization of magnetic materials. When the magnetic sheet is placed on the surface of the magnet, it can clearly see the distribution of the magnetic poles and the distance between each pole, and it can be distinguished that it is a few pole magnetization. It is one of the indispensable testing tools for the manufacturers of permanent magnet materials industry, especially for the effect testing of multi pole magnetization magnet, which is the most intuitive high-tech nano magnetic product for pole observation and testing, mainly for the manufacturers of multi pole magnetic rings and permanent magnet motors Used by assembly enterprises.

The magnetic pole display film, also known as the magnetic pole piece or the magnetic magic mirror, is invisible and intangible after the ordinary magnet is magnetized. If you have the "magic mirror" - the magnetic pole display film, you can take a clear picture of the magnetic circuit in the magnet, which is convenient for your use and design.

PS: The size can be produced according to customers.

Effect:
