

## Funduino Nano 328P IO Shield for Arduino Expansion Adapter

Module: EB0021

### Product description:

NANO multi-purpose expansion board is ADUINO NANO tailored a sensor expansion board. It solves a variety of sensors in connection with the problem of wiring confusion NANO.

All digital IO ports and analog IO ports, each port has a standard IO positive and negative power connector.

I2C interface on the motherboard, convenience and I2C device is connected.

Increasing the DC power connector. NANO USB interface, power supply current board actually only 50MA. If you want to take a large current devices, such as servo, electric current is obviously insufficient, this time in DC can provide external power supply interface, ensure stable device operation.
