

## ESC-24-30A

Three-phase brushless and motor controller DC 7-24V DC Motor BLDC Motor with pot

ESC is developed and designed for all kinds of industrial control power tools such as air pump, water pump, oil pump, fan using three-phase brushless DC motor, standard in high-current working angle for a long time, it is recommended to add a suitable heatsink with a fan for cooling with protection against overheating, when the external heat dissipation conditions of the ESC are poor, resulting in temperatures above 100 degrees, automatically reduce the energy, the temperature drops to 100 degrees.

The new high-power BLDC high-power 7-24V brushless speed control, supports 0-5V potentiometer signal control.
