ZINK 62

RUST PROTECTOR

ZINK 62 is a zinc-based galvanic rust protector containing zinc with a purity over 95 %.

It prevents rust and provides long-lasting protection against aggressive environmental factors to all types of ferrous metals.

Where galvanised surfaces have become damaged or altered through drilling, cutting, welding or screwing, reliable corrosion protection, is required.

FEATURES	APPLICATIONS
<ul style="list-style-type: none"> • Forms a resistant, flexible, electrically conductive, protective film. • Good adhesion on the base metal. • Protects the base metal even when scratched or damaged. • Excellent weldability. • Will not flake off. • Lead and chromate free. 	<ul style="list-style-type: none"> • Can be used in: <ul style="list-style-type: none"> - Gas, water and electricity supply companies - Power stations - Transformers - Railway equipment - Street-lighting - Car bodywork manufacture • Can prevent salt water corrosion in shipping and coastal area installations.

Colour :	grey
Densityat 20°C :	0,98 g/cm³
Tack-free time :	approx. 15 min.
Hardening time : (30 µm film thickness)	24 hours (20°C)
Coverage :	15 m² / l
Temperature resistance :	200°C continuous
