Ks0061 keyestudio 1602 I2C Module

Introduction:

keyestudio 1602 I2C module is a 16 character by 2 line LCD display with Blue background and White backlight. The original 1602 LCD needs 7 IO ports to be up and running, but ours is built with Arduino IIC/I2C interface, saving you 5 IO ports.
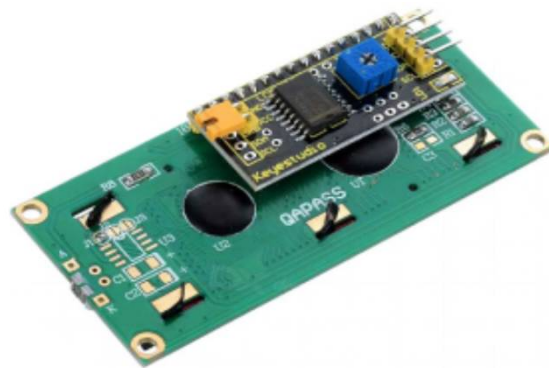

This LCD is ready-to-use because it is compatible with the Arduino Liquid Crystal Library. LCDs are great for printing data and showing values. Adding an LCD to your project will make it super portable and allow you to integrate up to 32 characters (16x2) of information.

Specification:

Input voltage: DC 5V

Control signal: I2C

Address:0x27
