## Ks0287 keyestudio SIM5320E 3G Module (Black)

### Introduction:

keyestudio SIM5320E 3G module is a mobile phone module, it can be used for GPRS data transmission, supporting both Mobile and Unicom.

This module has the function of GPS positioning, with the features of powerful functions and less external circuits, etc. When registering the network and RF multi-slot sending, the current consumption peak may reach 2A, which will inevitably lead to voltage sags, so the power system generally requires more than 2A current supply capability.

### Specification:

Supply Voltage: 5V

Current: 2A

Interface: USB
