KS0410 Keyestudio ESP-01 DS18B20 Temperature Module

Introduction:

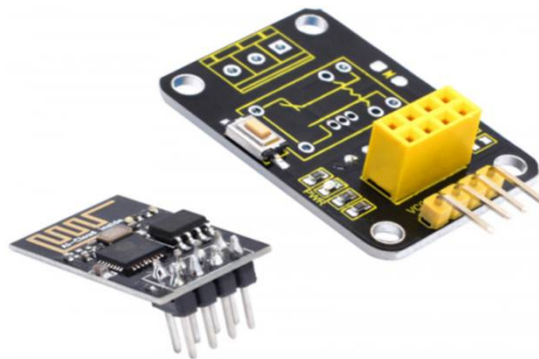

DS18B20 Temperature Module is one of the most commonly used components for setting the smart home when we are doing the Internet of Things. For wireless control, we specially designed this ESP-01 DS18B20 Temperature module. The DS18B20 Temperature module is equipped with an ESP8266-01 Wifi module, which can access to the wireless network. You can remote control any other devices according to the temperature data measured by the DS18B20 module.

Specification:

Supply Voltage: 3.3V

Current: >10mA

Interface: SPI
