KS0447 Keystudio Micro TF Card Write-Read Module

Introduction:

The TF card is the most commonly used storage element for interactive media devices. Keystudio micro TF card read-write module uses SPI communication to read or write data to the TF card.

When using, we just insert the TF card into the TF card socket, connect the keystudio MicroSD module to the MCU, and then read/write the TF card through programming.

Specification:

Supply Voltage: 5V

Current: 10mA

Interface: SPI
